

— OS. BANDWIDTH —

Dynamic Bandwidth Management

Benefits

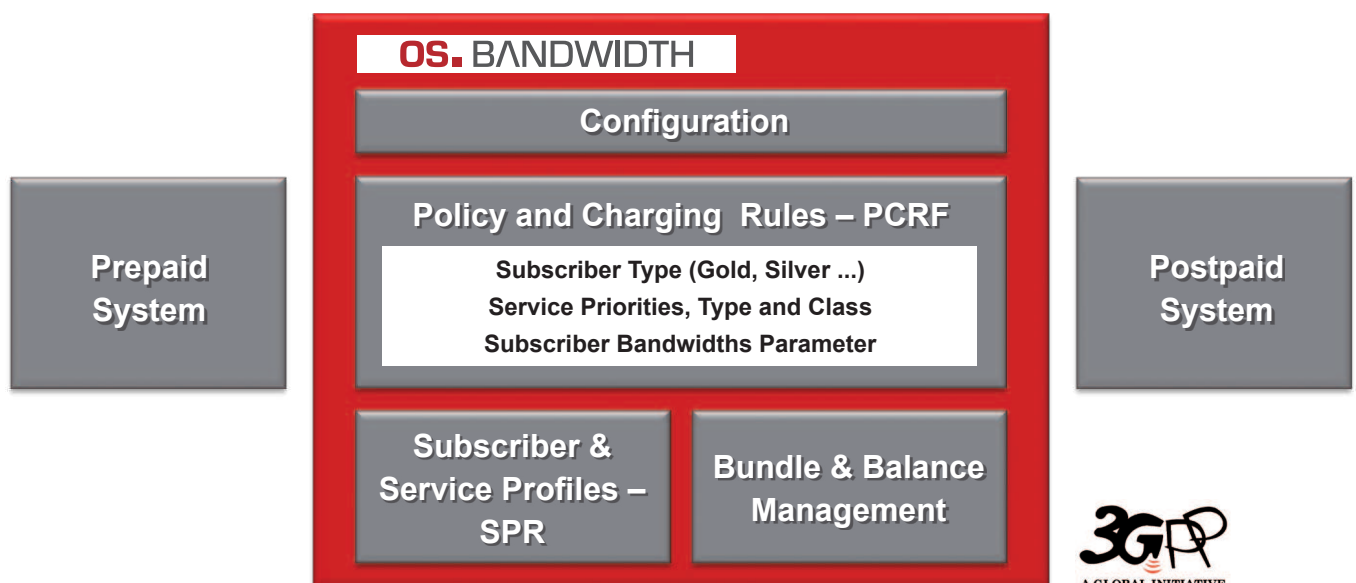

- Real-time bandwidth management
- Personalized data services
- Reduced network expansion cost
- Easy growth to enhanced policy management

- OS.Bandwidth is Orga Systems' dynamic bandwidth management solution that helps mobile operators to keep control of their network utilization and turn bandwidth into a differentiating revenue asset. Fast time to operation and reduced implications to the legacy charging and billing landscape can be realized by the "overlay solution" concept.
- 5 — OS.Bandwidth provides real-time multi parameter bandwidth management to encounter network limitations with tiered services, dynamic pricing and network congestion management.
- 10 — Combining multiple parameters such as time of the day, used volume, ordered bundles or service type enables operators to overcome simple "Bronze - Silver - Gold" service differentiation. Dynamic bandwidth profiles help to encounter peak load periods.
- 15 —
- 20 —

With a component based architecture and runtime update capability, OS.Bandwidth enables dynamic service differentiation with fast launch of upgrade options, new service bundles.

With a subscriber and location aware congestion management, OS.Bandwidth enables operators to give priority to valuable subscribers. This helps to maintain the best customer experience within profitable subscriber segments.

OS.Bandwidth's standard compliant Policy and Charging Rules Function (PCRF) and integrated Subscriber Profile Repository (SPR) enable a straight forward integration that minimizes service providers TCO.
