

— OS. CONVERGENT —

Convergent Charging, Billing and Financial Management

Benefits

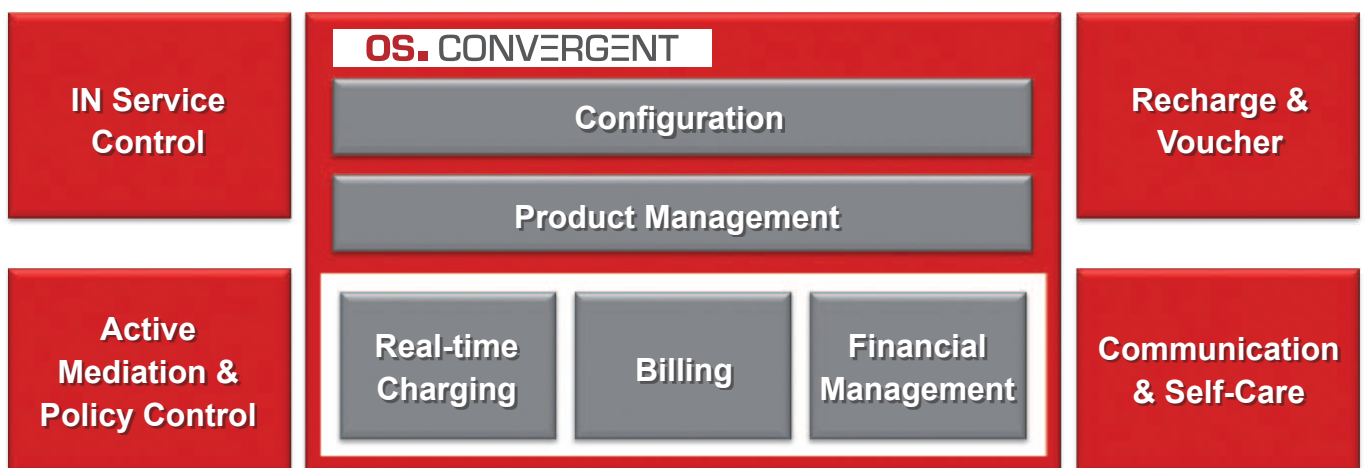

- Single system for customer, product and tariff management
- Superior performance and scalability
- Extensive billing and financial management for payments, journaling and collections
- Support for large account hierarchies
- Enhanced customer interaction
- Dynamic and configurable data model
- Policy management and bill shock prevention without data redundancy

— OS.Convergent is Orga Systems' end-to-end convergent billing solution. It provides real-time charging, billing and financial management capabilities and is the only system in the market that delivers true convergence within one system. Scalability and performance are outstanding and can be achieved on standard HW at lower cost.

As a fully convergent billing solution, OS.Convergent handles charging and billing for all services, customer segments and payment methods. Its leading real-time capabilities can easily be utilized to increase billing transparency and improve customer satisfaction, also for postpaid, hybrid and corporate subscribers.

Especially for markets in which high performance real-time processing is key, it provides an ideal solution to replace multiple IN prepaid and legacy postpaid systems. OS.Convergent is based on Orga Systems' OPSC® Gold product, featuring its leading in-memory database technology InCore®.

OS.Convergent is already pre-integrated with Orga Systems' IN service control, active mediation and policy control modules. Bandwidth management and bill shock prevention can be provided without redundant subscriber data management. Recharge and voucher management applications can easily be added. Orga Systems' customer interaction and self-care products complete OS.Convergent, making it an integrated end-to-end solution.
