

OS. CORPORATE

Convergent Billing and Mobile VPN for Corporate Customers

Benefits

- Corporate billing and mobile VPN management in one system
- Differentiated real-time charging
- Licensable number of VPN members
- Versatile VPN calling features
- Individual spending and credit limits
- Dual invoicing for business and private use
- Convenient business account and VPN management

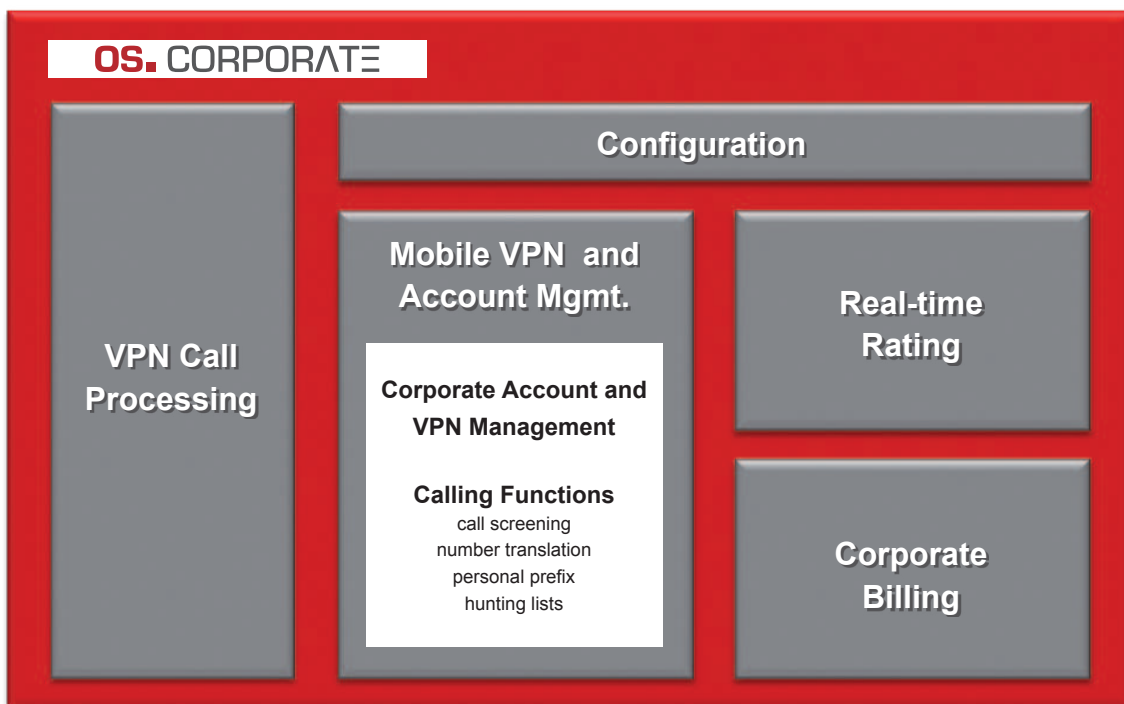

OS. Corporate is Orga Systems' solution, enabling CSPs to offer extended corporate billing and mobile Virtual Private Network (VPN) functions to their business customers. The highly flexible convergent billing solution includes integrated mobile VPN management, call processing and advanced calling functions.

Due to its flexible build, it supports all types of differentiated charging and allows for hierarchical accounts with convergent prepaid/postpaid payment options. In addition, any organizational company structure can be modeled and supported with individual subscriber call handling features.

Based on OS. Corporate, highly individualized contract agreements can be negotiated with business customers,

taking into account the organizational structure as well as the number of VPN members. The versatile VPN calling features include hunting lists with alternative destination numbers, incoming and outgoing call screening functions, as well as a number of translation functionalities.

A dedicated GUI enables the operator to conveniently manage business accounts and multiple VPN groups. OS. Corporate provides differentiated charging of calls within the VPN, from the VPN to other destinations and for calls to associated VPNs. Individual spending limits for each hierarchical account level and dual invoice capabilities for business and private use deliver efficient cost control functionalities.

CORPORATE | PREPAID | POSTPAID | HYBRID

OS. REVENUE

Orga Systems' SmartRevenue Suite™ for convergent real-time charging, billing and financial management offers a range of outstanding solution propositions as well as various deployment options. It provides leading real-time capabilities for all: prepaid, postpaid, hybrid and corporate subscribers. Real-time charging, policy management and bill shock prevention are inherent components and can be provided without redundant subscriber data management.

On top of this, the SmartRevenue Suite™ provides excellent marketing and customer retention functionalities, as well as outstanding scalability and industry leading real-time performance.
