

— OS. PREVENT —

Bill Shock Prevention for Data Services

Benefits

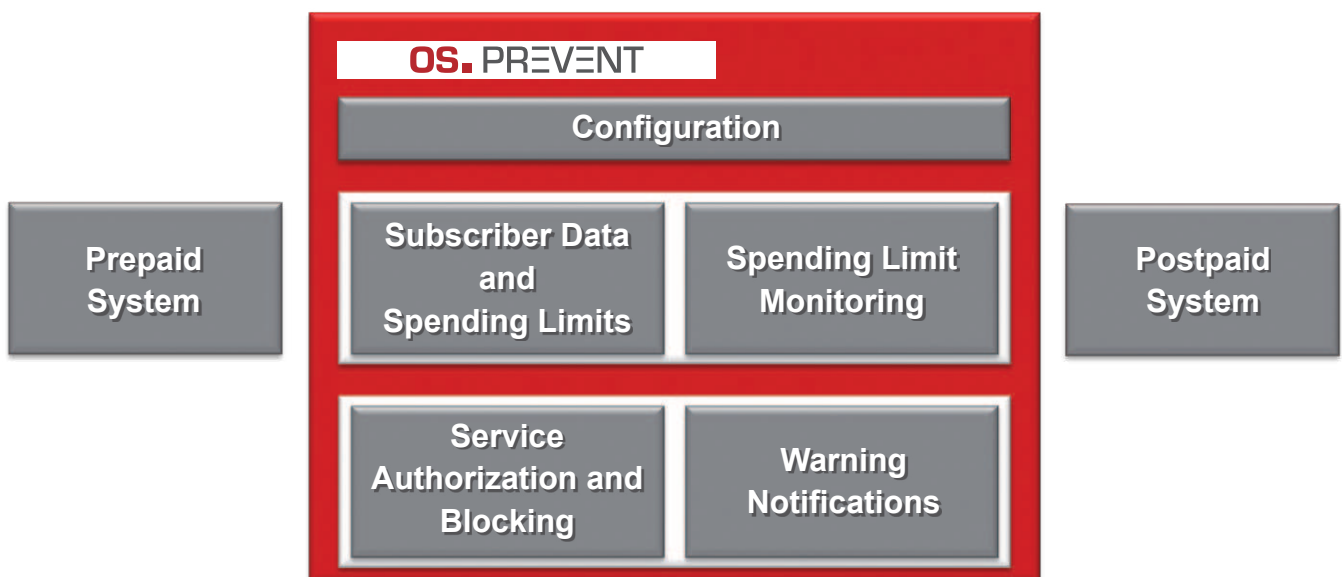

- Real-time spending limits
- Short deployment time
- Enhanced customer interaction
- Future proof scalability and design

- OS.Prevent is Orga Systems' pre-packed bill shock prevention solution that helps mobile operators to create transparency in mobile data usage and to meet regulatory requirements. The "overlay solution" concept enables a fast time to operation and reduces implications to the legacy charging and billing landscape.
- 5 — OS.Prevent provides real-time threshold monitoring, service authorization and convenient subscriber interaction.
- 10 — Flexible monitoring conditions enable service providers to define service class, usage type and accumulation periods individually. With this bill shock prevention, limits can be
- 15 — activated for any data service, across
- 20 — different radio networks, while roaming and while in the home network.

Using diameter-based service authorization, OS.Prevent provides 3GPP compliant real-time access control. Automatic re-direction in case of service termination maintains the subscriber experience and stimulates usage even in roaming.

Tiered subscriber notification enables a continuous subscriber interaction. With configurable pre-warning notifications, service termination notifications and redirection to operator web sites, bill shock prevention turns into a marketing element.

OS.Prevent is designed in accordance with latest 3GPP standard specifications. A straight forward integration minimizes service providers TCO.

POSTPAID | HYBRID | CORPORATE

OS. REVENUE

Orga Systems' SmartRevenue Suite™ for convergent real-time charging, billing and financial management offers a range of outstanding solution propositions as well as various deployment options. It provides leading real-time capabilities for all: prepaid, postpaid, hybrid and corporate subscribers. Real-time charging, policy management and bill shock prevention are inherent components and can be provided without redundant subscriber data management.

On top of this, the SmartRevenue Suite™ provides excellent marketing and customer retention functionalities, as well as outstanding scalability and industry leading real-time performance.
