

Press Release 10-2011

Dynamic Energy Billing allows for flexible tariff configuration

Orga Systems enables new personalized offers and service bundles

Paderborn (Germany) 22 February 2011: Orga Systems, #1 choice for real-time charging and billing, offers a SmartEnergy Suite enabling dynamic pricing for energy providers. Dynamic energy billing enhances energy efficiency and helps reducing CO2 emissions. Energy providers can now efficiently cope with the challenges renewable energies from volatile sources bring into the business, while the flexible tariff configuration of the solution allows offering prepaid, time of use or critical peak pricing. Orga Systems' flexible tariff configuration and simulation features provide easy to use means to launch new offers and service bundles – a key benefit also for the consumer, who can constantly monitor and therefore easily lower the energy consumption to save money.

Dynamic billing will enhance energy efficiency

Using configurable projection time and considering external events such as weather forecasts (wind/sunshine) make personalized tariffs match perfectly. This is to change consumption behavior of the consumer and to enable intelligent home automation services. As the energy sector is becoming more and more competitive, energy retailers need to offer attractive new tariffs and services. Orga Systems' flexible tariff configuration and simulation features provide easy to use means to launch these offers and service bundles. The support of standard interfaces allows for easy integration into existing meter data management and utility CIS systems.

Real-time processing ensures accurate prices

By dynamically adjusting the tariff to the consumer, consumption can be stimulated. This can avoid negative pricing or grid congestion in phases of high throughput when using energy from volatile renewable energy sources. Demand side energy management while at the same time meeting regulatory requirements will become an easy task. Real-time processing of load and price signals between multiple providers, users and devices is required to ensure accurate prices. Orga Systems enables dynamic pricing for volatile renewable energy, which is configurable by a centralized rating engine.
